K .J.Somaiya Polytechnic, Mumbai-77

Batch No: C2

Enrollment No.: FCOG19126

Experiment No: 2

Experiment Name: Create a web page using external JavaScript.

Experiment No. 02

Experiment Name: **Create a web page using external javascript**

Objective: O18RA63.4.Perform client side form validation using Javascript.

Theory:

New concept-

External JavaScript

- Scripts can also be placed in external files:

- External scripts are practical when the same code is used in many different web pages.

- JavaScript files have the file extension **.js**.

- External scripts cannot contain <script> tags.

- To use an external script, put the name of the script file in the src (source) attribute of a <script> tag:

- Example

<script src="myScript.js"></script>

Implementation & Output –

1.Write a program which will create external javascript code which will display welcome message in bold and underline form.

Program:

HTML:

<html>
<head>
<script type="text/javascript" src="external.js"> </script>
</head>
<body>
This is example of external javascript file.
</body>
</html>

JAVASCRIPT:

**document.write("<u> WELCOME </u>" + "

");**

Output:

WELCOME

This is example of external javascript file.

Conclusion- Thus, we have learnt how to create webpage using external javascript.
